Title: FUNCTIONAL ASSAYS FOR IDENTIFYING COMPOUNDS
THAT MODULATE T1R1/T1R3 (UMAMI) TASTE

Customer No. 23911

Confirmation No.

PRELIMINARY AMENDMENT

Mail Stop Non-Fee Amendment
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Prior to examination of the above-identified application, kindly cancel all the original claims 1-193 and insert new claims 194-256.

These claims are all directed to functional assays for identifying compounds that activate or modulate the activity of the T1R1/T1R3 umami taste receptor. As discussed in the subject application, T1R1 and T1R3 sequencers when co-expressed in a recombinant host cell respond specifically to umami taste stimuli such as monosodium glutamate. Therefore, compounds that activate or modulate the activation of T1R1/T1R3 potentially can be used as flavor enhancers and flavor additives in foods and beverages.

Amendments to the Specification begin at page 3 of this paper.

Amendments to the claims are reflected in the listing of claims beginning page 4 of this paper.

A new Title is identified on page 12.

A new Abstract of the Disclosure is submitted herewith (attached as a separate page to this Preliminary Amendment).

Remarks begin on page 14 of this paper.
